Dear Sir or Madam,

TAKE CARE OF IT!

The regular maintenance of your crosslapper is essential for a safe production.

 The main parts to be regularly checked and changed are:

- **Cables**
- **Timing belts**
- **Carbon aprons**
- **Driving rolls**

Surface wear may lead to textile defects.

- **Output aprons**

When the lattice surface is worn, the correct laying of the first web becomes impossible.

- **Bearings**

From experience, the average lifetime of a bearing is approximately 5 years. Our advice: do not change them one by one! Take advantage of an apron change to replace them all.

 Regarding previous generation crosslappers, you have to watch closely:

- **Carpet**
- **Brakes**
- **Redex pulley**
- **Electronic board for brakes**

In order to be fully complete, do not forget to store : electronic cards, inverters, encoders and power supplies
