Dear Sir or Madam,

KEEP AT THE TOP LEVEL!

A.25 needlelooms:

This generation of needlelooms from the 80's still gives good results provided they are well maintained.

The main parts to be regularly checked or changed are:

- **Connecting rod, big and small ends**
- **Guiding boxes**
- **Gear boxes**
- **Inflating tubes**
- **Driving belts for the rods**
Severe damages may occur in case of belts breakage. We advise a regular replacement of the belts.
- **Needle boards** (pay attention to the adjusting screws)
- **Greasing following the manual's instructions**

A.50 needlelooms:

This new generation of needlelooms is designed to be sturdy. They need a regular maintenance like:

- **Stroke motor check**
- **Greasing following the manual's instructions (bearings etc.) and the replacement of:**
 - **Oil for the modules**
 - **Cartridge filters**
 - **Cooling pipes (every 4 years)**
 - **Textile protections of the modules (socks)**
 - **Seal housing kits**

In order to be very complete, do not forget to store: electronic cards, inverters, encoders and power units.

Contact us!

Yours faithfully,
NSC nonwoven Customer Service
