Dear Customer,

CPU'S EVOLUTION!

For the past 20 years, we have been using the IPC Rack technology for the equipment we sell all over the world. Since the very beginning, our target has always been to provide our customers with highly performing and reliable equipments, but also to keep the compatibility between our electronic boards of new and old generation.

Today, due to the obsolescence of some electronic components - disk-on-chip - and to the fast development of the display resolution, we have brought to the market a new CPU2 -main board of the IPC Rack.

In some specific cases, we will have to adjust parameters and develop a special software to replace a CPU by a CPU2.

Please fill the attached questionnaire, it will help us to determine if modifications are necessary. If so, an Asselin-Thibeau electronics engineer will have to come to your site and make adjustments to fit the CPU2. To avoid any unforeseen downtime of your nonwoven line, we suggest you to call our Customer Service assistance to quote and schedule this operation as a preventive action.
